

ORCID: 0009-0003-0693-7216 | Email: jinjp2023@shanghaitech.edu.cn

Education

2023–2025 **MSc in Computer Science**, ShanghaiTech University, China.
2018–2022 **BSc in Computer Science**, Hangzhou Dianzi University, China.

Skills

Programming and Tools: Python, Linux, $\LaTeX$, Git, Docker, Slurm, Blender, etc.
Research: 3D Human/Animal Pose Estimation, Motion Capture Processing, Dataset Curation & Evaluation

Awards

- **Meritorious Winner**, Mathematical Contest in Modeling (MCM, COMAP) 2021
- **First Prize**, Zhejiang Province, China Undergraduate Mathematical Contest in Modeling (CUMCM) 2020
- **Third Prize**, China Undergraduate Mathematics Competition 2021

Research Experience

SKELVIT: Developed a novel human pose estimation framework, SKELVIT, leveraging the SKEL human model as an alternative to SMPL. Constructed a large-scale SKEL training dataset by fitting existing SMPL-based motion data, and designed a transformer-based architecture for robust 3D pose regression. Achieved substantial improvements over the CVPR 2025 SKEL baseline across multiple challenging benchmarks, with performance comparable to state-of-the-art SMPL-based models. Currently collaborating with DiDi to further advance this project.

Nighttime Glare Suppression: Proposed a stereo-based acquisition and registration pipeline for nighttime driving image/video pairs, overcoming the limitations of small-scale and synthetic datasets. Collected the *NDF110K* dataset of real driving scenes under complex lighting, the first large-scale nighttime glare video dataset. Demonstrated significant improvements on downstream tasks, boosting AP of vehicles and streetlights by 17.2% and 12% respectively, and reducing depth estimation RMSE by 6.5%.
