Education & Experience

2026–2029 (Expected)	PhD in Computer Science , University of Auckland, New Zealand.
2025–2026	Research Intern , Intellindust AI Lab, China.
2023–2026	MSc in Computer Science , ShanghaiTech University, China.
2018–2022	BSc in Computer Science , Hangzhou Dianzi University, China.

Skills

Programming and Tools: Python, Linux, $\LaTeX$, Git, Docker, Slurm, Blender, etc.
Research: 3D Human/Animal Pose Estimation, Motion Capture Processing, Dataset Curation & Evaluation

Research Projects

SKEL-CF: Developed a novel human pose estimation framework, SKELVIT, leveraging the SKEL human model as an alternative to SMPL. Constructed a large-scale SKEL training dataset by fitting existing SMPL-based motion data, and designed a transformer-based architecture for robust 3D pose regression. Achieved substantial improvements over the CVPR 2025 SKEL baseline across multiple challenging benchmarks, with performance comparable to state-of-the-art SMPL-based models.

SemanticStitch: Proposed an object-aware seam carving framework for image stitching that leverages foreground semantics to avoid seams crossing important objects, ensuring that salient foregrounds are preserved and not split, and achieving consistently better seam quality and no-reference IQA than classical and recent deep methods.

Nighttime Glare Suppression: Proposed a stereo-based acquisition and registration pipeline for nighttime driving image/video pairs, overcoming the limitations of small-scale and synthetic datasets. Collected the *NDF110K* dataset of real driving scenes under complex lighting, the first large-scale nighttime glare video dataset. Demonstrated significant improvements on downstream tasks, boosting AP of vehicles and streetlights by 17.2% and 12% respectively, and reducing depth estimation RMSE by 6.5%.

Academic Services & Honors

Reviewer for ICIP 2025, AAAI 2024	
• Awarded “Outstanding Teaching Assistant”	2024
• Meritorious Winner , Mathematical Contest in Modeling (MCM, COMAP)	2021
